

NextGenData BizHost™

MANAGED HOSTING AND COLLOCATION SERVICES

ENTERPRISE DATA CENTER SOLUTION

BizHost — Sitting on the edge of the most robust network backbone available today, our carrier-class collocation facilities include fully redundant connectivity with the service, support and security you expect from NextGenData services. We also provide fully redundant power supplied by backup generator and UPS systems. NextGenData provides multivendor solutions for your collocation and bandwidth requirements. The facility is the central hub for data and telecommunication and offers direct connectivity to just about everyone.

The data center offers 24" raised flooring, around the clock security guards, video camera monitoring, card key access system, Halon fire suppression system, air-conditioning and climate control. Open racks, closed cabinets and more. We offer managed hosting and collocation of equipment and services, such as secondary disaster recovery site equipment, Web application servers, 3rd party applications, anti-spam email, high-speed printing and mailing, or corporate portal.

Our Facility offers the following advantages:

Carrier Neutral – Enables small to large businesses to choose among competitive offerings rather than being restricted to any one carrier.

Carrier-grade Infrastructure – Delivers customers the highest level of operative reliability and security.

Shared Infrastructure – Provides small to large business and corporations the ability to spread the high costs associated with the equipment and IT resources required to operate a data center among all collocation customers, reducing capital expenditures while outsourcing functions that are not mission critical.

Flexible Space Arrangement – Allows small to large business and corporations to rent only the space needed now, yet later expansion remains simple and economical.

Leading-edge Enterprise Hosting - Our facility hosts leading-edge technologies including 33 Terabytes of IBM Enterprise Storage, IBM zSeries mainframe with multiple operating system partitions including Linux, and fully redundant Gigabit Ethernet connectivity.

In addition to BizHost, NextGenData provides the following services to small to large business and corporations:

BizBackup™ – E-Vaulting (enterprise and personal), data backup and archiving

BizConnect™ – Combines an enterprise data center, highly scalable gigabit Ethernet Internet access, and highly survivable private metro ring transport to collapse multiple services such as voice, data and Internet access into a single converged edge environment.

BizSecure™ – Internet access, network monitoring and acceptable use compliance

BizTone™ – Hosted voice, unified messaging, and audio and Web conferencing

Our Facility

- 24x7 Network Operation Center
- 24x7 Secure entry system with security guards
- Uninterruptible power supply (UPS)
- On-site backup power
- Halon fire suppression system
- Data-grade HVAC
